Abstract
In an increasingly globalized world, quality management and international accreditation processes have become fundamental elements to ensure excellence in higher education. This article analyzes the relationship between quality management, international accreditation processes and the development of student competencies. A methodology is presented to evaluate and improve educational quality, highlighting the importance of skills as a key factor in the training of students. The results show the close relationship between quality management, international accreditations and the strengthening of student competences. In conclusion, the need to implement effective quality management strategies and obtain international accreditations to enhance the development of competencies in students is highlighted.

Keywords: quality management, international accreditations, student competencies, higher education, educational excellence.

Introduction
Quality management in higher education is essential to ensure the comprehensive training of students and guarantee educational excellence. In a globalized context, higher education institutions must adapt to international standards and undergo accreditation processes to
demonstrate their quality and competitiveness. These accreditation processes, promoted by recognized international organizations, are a key tool to evaluate and improve educational quality.

Competence in the educational field is increasingly relevant. Employers are looking for professionals capable of meeting the changing challenges of the world of work and society, and student competencies play a crucial role in this regard. Competences not only refer to the theoretical knowledge acquired, but also to the skills, attitudes and values that students develop throughout their training.

Today, student competencies have become a determining factor for the personal and professional success of individuals. Employers look for candidates with skills such as teamwork, problem solving, effective communication, critical thinking, and adaptability. Therefore, it is essential that higher education institutions focus their efforts on the development of competencies in their students.

Quality management and international accreditation processes play a key role in fostering and developing student competencies. These processes not only ensure the quality of the education provided, but also promote the adoption of innovative practices, continuous improvement and orientation towards concrete results.

International accreditations recognize the quality and excellence of educational institutions, evaluating aspects such as organizational structure, study programs, human resources, facilities and linkage with the socioeconomic environment. Obtaining an international accreditation implies a rigorous process of evaluation and improvement, which drives the institution to achieve globally recognized quality standards.

In this context, it is crucial that higher education institutions understand the importance of quality management and international accreditation processes as strategic tools for the development of student competencies. These initiatives promote academic excellence, educational innovation and the training of highly competent professionals adapted to the demands of the labor market.

In this article, the relationship between quality management, international accreditation processes and the development of student competencies will be analyzed. A methodology will be presented to evaluate and improve educational quality, highlighting the importance of skills as a key factor in the training of students. In addition, results and conclusions will be shared that support the relevance of implementing effective quality management strategies and obtaining international accreditations to enhance the development of competencies in students.
Methodology

To analyze the relationship between quality management, international accreditation processes and student competency development, a case study was conducted at a higher education institution. The choice of a case study allowed to obtain a detailed and contextualized understanding of the processes and results in a specific environment.

The methodology used was mixed in nature, combining the collection of quantitative and qualitative data to obtain a comprehensive view of the topic. The following describes the steps followed in the research process:

1. Institution Selection: A higher education institution was selected that had international accreditations and a clear focus on the development of student competencies. The choice was made considering the availability of data and the willingness of the institution to participate in the study.

2. Quantitative data collection: Quantitative data related to quality management and international accreditation processes were collected. This included reviewing institutional documents, evaluation reports, policies and procedures related to educational quality and accreditations. Quantitative data also covered quality indicators, such as graduation rates, graduate employability rates, and results of external evaluations.

3. Collection of qualitative data: Interviews and surveys were carried out with students in order to evaluate their competences and obtain their perception about the quality of the education received. The interviews were conducted through open-ended questions that allowed students to express their opinions, experiences and reflections on their academic training and skills development. The surveys were designed using measurement scales that allowed quantifiable data to be collected on students' perception.

4. Data analysis: The collected data was analyzed in an integrated manner, combining quantitative and qualitative analysis. Quantitative analysis was performed using descriptive statistical techniques to identify patterns and trends in quality indicators. The qualitative analysis consisted of coding and categorizing the students’ responses in interviews and surveys, seeking to identify emerging themes and patterns of meaning.

5. Data triangulation: Data triangulation was carried out to validate and enrich the results. Quantitative and qualitative data were compared to identify convergences and discrepancies, allowing a more complete understanding of the phenomena studied. In addition, the findings were contrasted with the existing literature and experts in the field of quality management and international accreditations were consulted.
6. Interpretation of results: The results obtained were interpreted considering the theoretical framework and the objectives of the research. Relationships and correlations between quality management, international accreditations and student competency development were identified. The strengths and areas for improvement of the institution studied were highlighted, as well as the implications of the results for the educational community at large.

The methodology used in this case study provided a holistic and detailed view of the relationship between quality management, international accreditation processes and student competency development. The data collected and the analyses carried out allowed to obtain informed conclusions and recommendations to strengthen the educational quality and enhance the development of competences in students.

**Theoretical framework**

The theoretical framework was based on existing literature on quality management in higher education, international accreditation processes and student competency development. Relevant studies and theoretical models were reviewed to substantiate the relationship between these elements.

Quality management in higher education is based on theoretical approaches and models that promote continuous improvement and educational excellence. Some of the theoretical frameworks relevant to this topic include:

1. Model of the quality dimensions of education: This model proposes that educational quality is based on several dimensions, such as teacher quality, educational resources, curriculum, infrastructure and institutional management. These dimensions interact with each other and contribute to the formation of student competences.

2. Continuous improvement cycle: This approach is based on the Plan, Do, Check and Act (PDCA) cycle and promotes the implementation of improvement actions in a systematic manner. Quality management in higher education relies on this cycle to identify areas for improvement, set objectives, implement corrective and preventive actions, and evaluate the results obtained.

3. International accreditation models: International accreditation processes are based on models and standards established by globally recognized bodies. Examples include the Higher Education Quality Council of Ontario (HEQCO) quality assessment model, the European Quality Assurance Register for Higher Education (EQAR) accreditation model, and the Council for Higher Education Accreditation (CHEA) accreditation model. These models establish criteria and guidelines to
evaluate the educational quality of institutions and promote the development of student skills.

4. Competency-based approach: This approach focuses on the development of competencies in students, which include both theoretical knowledge and practical skills. The competency-based approach seeks that students acquire the necessary skills to face work and social challenges, promoting active learning, problem solving, effective communication and critical thinking.

Summary in tables:

Below is a summary in tables of the key points addressed in the article:

**Table 1: Quality dimensions in higher education**

<table>
<thead>
<tr>
<th>Quality dimensions</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Quality of the teaching staff</td>
<td>Teacher experience and qualification, teaching methodologies, student support, feedback</td>
</tr>
<tr>
<td>Educational Resources</td>
<td>Libraries, laboratories, educational technology, teaching materials</td>
</tr>
<tr>
<td>Curriculum</td>
<td>Design of study programs, relevance and updating of contents</td>
</tr>
<tr>
<td>Infrastructure</td>
<td>Physical facilities, equipment, technological resources</td>
</tr>
<tr>
<td>Institutional management</td>
<td>Policies, procedures, leadership, participation of the educational community</td>
</tr>
</tbody>
</table>

**Table 2: Continuous improvement cycle in quality management**

<table>
<thead>
<tr>
<th>Phases of the continuous improvement cycle</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Plan</td>
<td>Setting objectives, identifying areas for improvement, designing strategies and actions</td>
</tr>
<tr>
<td>Do</td>
<td>Implementation of planned actions, execution of improvements, collection of data and evidence</td>
</tr>
<tr>
<td>Check</td>
<td>Evaluation of the results obtained, comparison with established standards, analysis of gaps and deviations, identification of areas for improvement</td>
</tr>
<tr>
<td>Act</td>
<td>Corrective and preventive actions, adjustment of strategies, realignment of objectives, continuous monitoring of the improvement process, feedback and learning</td>
</tr>
</tbody>
</table>
Table 3: International accreditation models

<table>
<thead>
<tr>
<th>International accreditation models</th>
<th>Responsible body</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>HEQCO Model</td>
<td>Higher Education</td>
<td>Evaluates the quality of higher education programs in Ontario, Canada, based on defined standards and criteria</td>
</tr>
<tr>
<td></td>
<td>Quality Council of Ontario (HEQCO)</td>
<td>by HEQCO. Provides institutions with recommendations and guidance for continuous improvement</td>
</tr>
<tr>
<td>EQAR Model</td>
<td>European Quality Assurance Register for Higher Education</td>
<td>Registers and evaluates the quality of quality assurance agencies in higher education in Europe</td>
</tr>
<tr>
<td>Modelo del CHEA</td>
<td>Council for Higher Education</td>
<td>Evaluates the quality and compliance with standards of higher education institutions in the United States</td>

</table>

Table 4: Competency-based approach

<table>
<thead>
<tr>
<th>Elements of the competency-based approach</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Competences</td>
<td>Knowledge, skills, attitudes and values that students must develop to face the challenges of the world of work and society</td>
</tr>
<tr>
<td>Active learning</td>
<td>Promoting the active participation of students in their own learning process, encouraging autonomy, research and problem solving</td>
</tr>
<tr>
<td>Troubleshooting</td>
<td>Ability to identify, analyze and solve problems efficiently and creatively, using appropriate strategies and tools</td>
</tr>
<tr>
<td>Effective communication</td>
<td>Ability to convey ideas and messages in a clear, coherent and persuasive manner, using different media and adapting to different audiences</td>
</tr>
<tr>
<td>Critical thinking</td>
<td>Ability to reflectively and objectively analyze information, evaluate arguments and evidence, identify biases and biases, and make informed decisions</td>
</tr>
</tbody>
</table>
The summary in tables provides a concise and organized visualization of the key points related to quality management, international accreditation processes and the development of student competencies. This facilitates understanding and quick access to the essential information presented in the article.

Results

The results of the study revealed that the implementation of an efficient quality management system and obtaining international accreditations have a significant impact on the development of student competencies. The institution studied demonstrated remarkable progress in educational quality, reflected in the high standards achieved in international accreditation processes.

In addition, the most strengthened competencies in students were identified, such as teamwork skills, problem solving, effective communication and critical thinking. These competencies were valued by both students and employers.

The results obtained in this case study revealed a strong correlation between quality management, international accreditation processes and the development of student competencies in the analyzed institution. Below are the main findings:

1. Improvement in quality indicators: The implementation of a quality management system based on international standards and obtaining international accreditations were associated with significant improvements in the institution's quality indicators. An increase in graduation rates, greater employability of graduates and greater student satisfaction with the quality of education received were observed.

2. Linkage with the work environment: Quality management and international accreditations promoted a close link between the institution and the work environment. Strategic alliances were established with companies and institutions in the sector, which allowed the realization of professional practices, internships and applied research projects. This connection to the world of work contributed to the development of specific competencies required by employers and increased employment opportunities for graduates.

3. Design of competency-oriented curricula: The implementation of a competency-based approach in curriculum design was one of the outstanding results. The programmes were structured so that students acquired the necessary skills for their professional performance, combining theoretical knowledge with practical activities and authentic learning experiences. This favored the development of skills such as teamwork, problem solving and effective communication.
4. Impact on students' personal development: Students reported having experienced significant growth in their personal development throughout their educational trajectory at the institution. They highlighted the acquisition of transversal competences, such as adaptability, autonomy, professional ethics and social responsibility. These competencies were not only valued by employers, but also contributed to the comprehensive development of students and their ability to face challenges in different areas of their lives.

5. International recognition of the institution: Obtaining significant international accreditations increased the recognition and reputation of the institution internationally. This attracted students and scholars from diverse countries, enriching the cultural and academic diversity on campus. In addition, it facilitated student mobility and collaboration in international research projects, which further boosted the development of intercultural competences and the global vision of students.

Overall, the results of the study highlight the importance of quality management and international accreditation processes as drivers of the development of student competencies and the improvement of educational quality. The implementation of internationally recognized quality strategies and standards benefits both students and the institution, strengthening their positioning and preparing them to face the challenges of the labor and social world successfully.

Conclusions

Quality management and international accreditation processes are fundamental to the development of student competencies in higher education. The implementation of an effective quality management system allows to improve the educational quality and provide a comprehensive training to students.

International accreditations are a tool for assessing the quality of institutions and their compliance with international standards. These accreditations not only recognize the excellence of the institution, but also encourage continuous improvement and the development of competencies in students.

In conclusion, the importance of adopting effective quality management strategies and seeking to obtain international accreditations to enhance the development of competencies in students is highlighted. This will ensure a comprehensive education and prepare students to face the challenges of a globalized and highly competitive world.

Based on the results obtained in this case study on quality management, international accreditation processes and the development of student competencies, the following conclusions can be drawn:
1. Quality management in higher education is fundamental to ensure academic excellence and promote the integral development of students. The implementation of a quality management system based on international standards and obtaining international accreditations are effective strategies to improve educational quality and ensure that study programs meet high levels of quality.

2. International accreditation processes play a crucial role in the evaluation and continuous improvement of educational institutions. These accreditations provide a framework for assessing the quality of study programmes, infrastructure, institutional management and other relevant aspects. In addition, the accreditation process encourages institutions to implement improvements and align their practices with recognized international standards.

3. The competency-based approach is essential to prepare students for the world of work and society. The development of specific and transversal competences is crucial for students to acquire the necessary skills to face current and future challenges. The design of competency-oriented study programs and the link with the work environment are key aspects to achieve this objective.

4. The implementation of quality management strategies and international accreditation processes has a positive impact on the employability of graduates. Employers increasingly value the competencies acquired during higher education, and international accreditation provides endorsement and recognition of the educational quality of the institution. This increases employment opportunities for graduates and strengthens their insertion into the labor market.

5. The international recognition of the institution through international accreditations contributes to its internationalization and global projection. The presence in international rankings and collaboration in international research projects strengthen the reputation of the institution and attract students and scholars from various parts of the world. This enriches students' educational experience and fosters cultural and academic diversity on campus.

In summary, quality management, international accreditation processes and the development of student competencies are interrelated and fundamental elements in higher education. These aspects complement and reinforce each other, creating an environment conducive to the integral formation of students and the continuous improvement of educational quality. The effective implementation of quality management strategies and the pursuit of international accreditations contribute significantly to the academic and professional success of students, as well as to the prestige and recognition of the educational institution.
